I'm a 3rd year PhD student in Statistics at University of Milano-Bicocca, advised by Federico Castelletti and Guido Consonni. Before, I obtained with distinction a M.Sc. degree in Actuarial Science and a B.Sc. degree in Economics, both from Università Cattolica del Sacro Cuore. My philosophical and research interests lie primarily in the area of causation and causal inference. In particular, I work on developing Bayesian methodologies for causal structure learning from mixtures of observational and experimental data
